

TAME THE DATA DELUGE

Better Data, Better Decisions

THE CHALLENGE

Organizations urgently need to optimize storage as they grapple with exploding data volumes. This surge drives up storage costs and creates data silos, impacting user productivity.

Globally, each person generates 1.7 MB of data per second, leaving 47% of digital workers unable to access vital information. Streamlining content management is crucial, not only improving accessibility but also cutting costs for organizations.

KEY STEPS

- 01 Understand your data** to make good decisions. Identify redundant, outdated, and trivial content with deep scans and intuitive reporting.
- 02 Uncover hidden factors** driving storage overages. Take action by deleting or archiving to cost-effective storage.
- 03 Create rules** for automated lifecycle control, ensuring compliance with legislative standards.
- 04 Scale classification** with machine learning, minimizing architecture mapping and user input.
