

STRENGTHEN YOUR HUMAN FIREWALL

With Email Security Awareness Training

Why Our Service

Our proactive end-user email security awareness training provides timely training for all users. With our service, our customers have seen a reduction in attack incidence, while users were empowered to report email threats, and meet internal and regulatory compliance needs.

A cyberattack occurs every 39 seconds and cybercriminals are counting on your users to take their bait. Businesses must educate their users to ensure that they are able to identify and respond to potential security risks to prevent cyberattacks

Cyberattacks, from ransomware to DDoS, pose serious threats to businesses. As cybercriminals grow more sophisticated, traditional email gateway security falls short. Equip your users with our proven email security awareness training to identify and report attacks, fortifying your defense against evolving cyber threats

Our Service Offers:

- Current, up to date, common attack content
- Monthly simulation campaigns
- Comprehensive reports to identify risks
