

# WEB APPLICATION FIREWALL

Your website is an important growth driver for your business, and cybercriminals know it. Protect this valuable asset against sophisticated, malicious threats with our web application firewall service to ensure your website is safeguarded.

## Simplicity with flexibility

A cloud-delivered Web Application Firewall (WAF) service that provides comprehensive application security to your publicly web hosted Web Applications and APIs. It provides unparalleled simplicity and built-in security policies that are massively scalable and globally available. Powered by Barracuda Networks, a trusted partner and leading provider of cloud-first security solutions, with over 15 years of experience safeguarding businesses' employees, data, and applications from a wide range of threats.

## Service Features

**Advanced DDoS protection:** Unmetered DDoS protection capabilities give you total piece of mind, blocking the entire scope of application threats - much more than just the OWASP Top Ten vulnerabilities

**Remediate vulnerabilities automatically:** When it finds vulnerabilities—even in apps that are still in development—it can remediate them automatically or with a single click. Detailed reporting of vulnerability discovery and remediation helps you demonstrate compliance.

**Powerful reporting:** Provides detailed logs automatically, and provides customized reports on demand, making it easy to demonstrate security for regulatory compliance or cyber insurance needs.
